

ABSTRACT

Stable aqueous laundry product provided in a first and second part contained within a package and physically separated from each other, where the first part comprises a liquid cleaning composition having a pH of from about 4 to about 10 and contains a deterative surfactant system; and a second part comprises a bleaching composition and has a pH of from about 0.5 to about 6, and contains an equilibrium peracid solution. The equilibrium peracid solution comprises: a source of hydrogen peroxide; from about 20% to about 98% water; a water soluble carboxylic acid; and a corresponding percarboxylic acid. Methods of laundering fabrics in a washing machine utilizing such laundry products.
